Native Capture

Preserve a Witness's Mouse Actions and Keystrokes with Video

Veritext's Native Capture service enables attorneys to display electronic documents to a witness during a deposition and record mouse movements and keystrokes on the computer screen in realtime.

Video
Create a video file of the witness's manipulation of the computer screen

Capture
Capture mouse movements, inter-cell calculations, drop-downs and formulas within spreadsheets

Sync
Synchronize file to the transcript, display in a stand-alone viewer or view using standard trial presentation software

Images
Produce high-quality images instead of externally videotaping a computer screen

Cohesive Evidence
Useful for all types of Native Evidence such as Java, Source Code, CAD files, Google Earth Fly-ins, and all Native Medical Evidence

Video Synchronization
Couple with videography to capture the witness's reactions as they click

Contact your local sales representative to recieve a demonstration or schedule your next deposition with Native Capture!
