

VIDEO SYNCH PACKAGE | GETTING STARTED GUIDE

VIDEO PACKAGE OVERVIEW

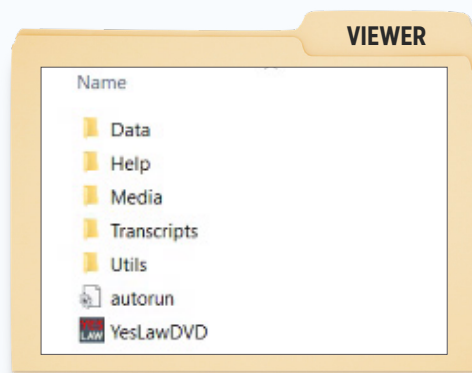

The standard video package includes video synchronized transcript files for both MPEG-1 and MPEG-4 files. Upon downloading your YesLaw files, the folder structure will appear as below.

VIDEO SYNCHRONIZATION VIEWER

(powered by YesLaw)

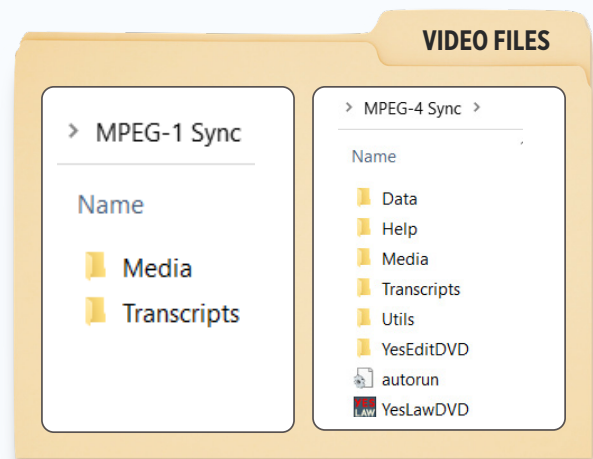

To launch your free license of YesLaw, open the **MPEG-4 Sync** folder and click on the **YesLawDVD.exe** file. For additional information on how to use YesLaw please go to the **Help** folder upon launching YesLaw. Once in the Help folder you can click the **Helpindex** icon to access instructions and information.

VIDEO FILES

Both the **MPEG-1 Sync** folder and **MPEG-4 Sync** folder have subfolders titled **Media**. The **Media** folder contains the appropriately formatted video files.

Both file types can be used for editing or clip creation as desired. You will also see a file called `mpeg.x`. This file allows MPEG playback within YesLaw. It is not necessary to interact with this file when using other programs.

IMPORT FILES

Included in each MPEG folder is a folder titled **Transcripts**. This folder contains load-files for the most used case management and trial software. Files that include hyperlinked exhibits must be ordered as a separate service.

SOFTWARE	IMPORT FILES	SOFTWARE	IMPORT FILES
Trial Director	cms	OnCue	mdb
Case Notebook	ptf, vid	Visionary	mdb
LiveNote	ptf, vid	Summation	sbf, mdb
TextMap	xmef	DepoSmart	clt
Sanction	mdb
